MTROBOTIX

MetriQ

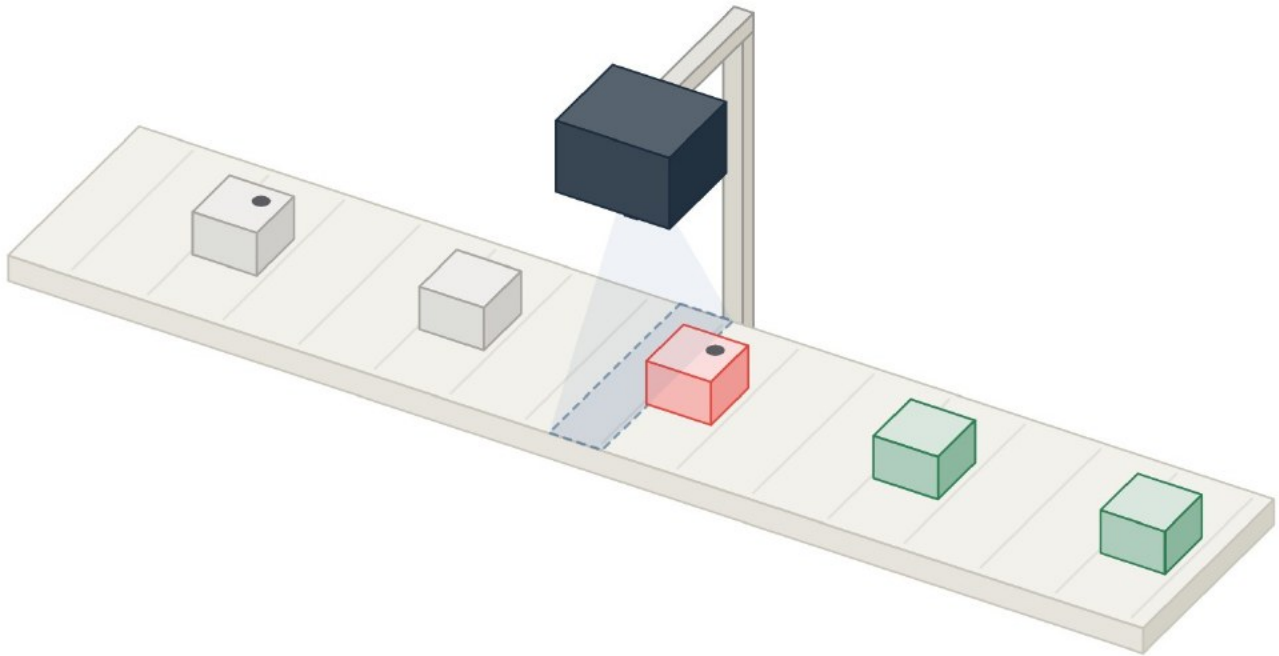

Installed in hours.
Zero downtime.

Catch any defect, instantly.

HOW IT WORKS

Every unit inspected. Defects removed.

1. **Camera checks each part** at line speed.
2. **Good goes green, defects red** with the defect named.
3. **Defects removed** by our pusher or your reject system.

PERFORMANCE

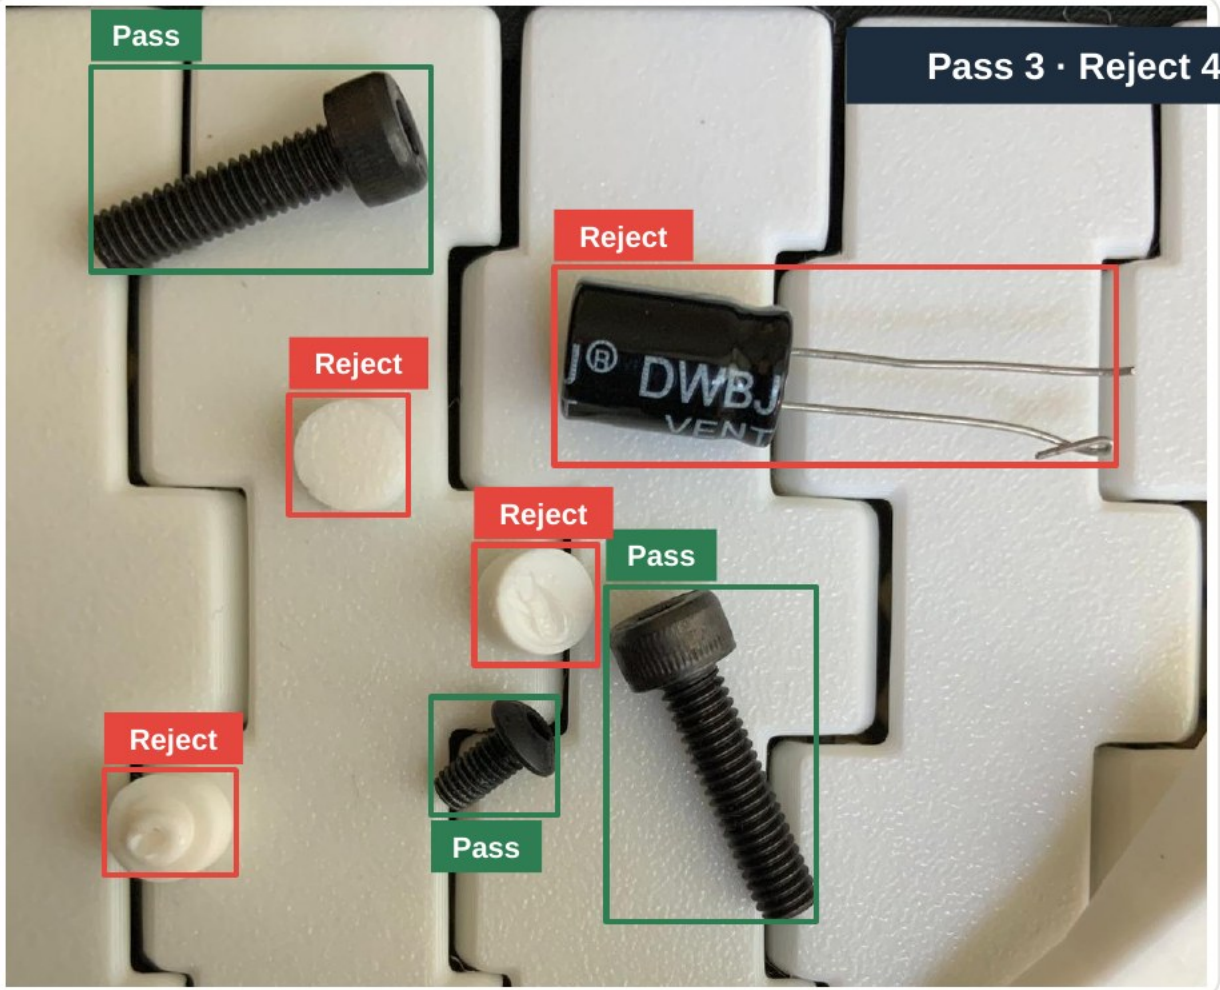

Built for line speed

100+	<1 mm	>99.5%	Hours
parts per second	smallest defect caught	of defects caught	from install to live

Your best QC inspector. On every unit, every shift.

WHAT IT DOES

One frame. Every check.

Count & identify
7 parts: 2 M4×20, 1 M3×6, 3 plastic, 1 unknown.

Measure
Length of every screw, in mm.

Colour
Finish against the black-oxide reference.

Defects
2 broken bolts, 1 in the wrong orientation.

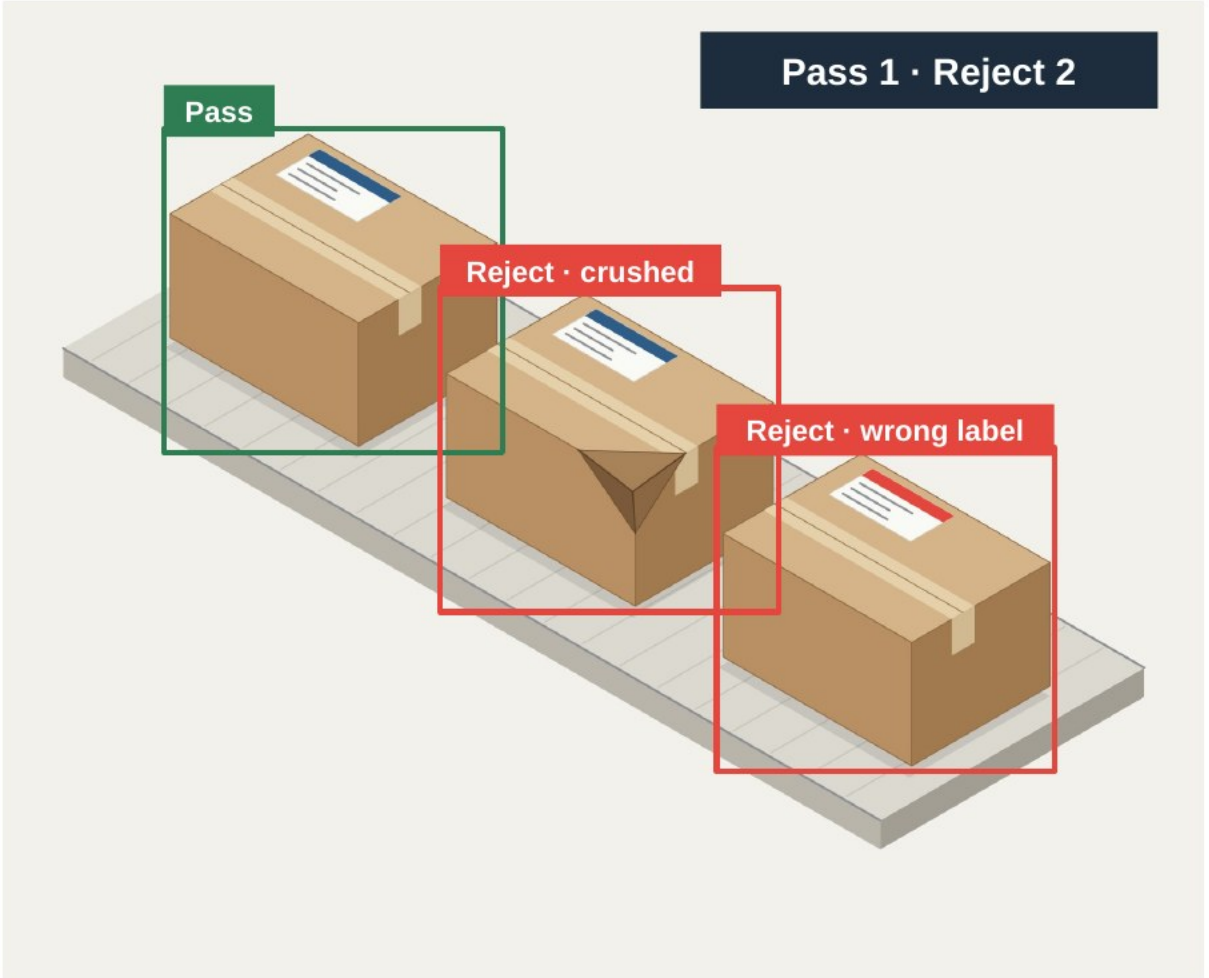

Anomalies
1 object it was never shown.

Verdict
3 pass, 4 rejected. Logged to the shift report.

Real frame, MetriQ readings drawn for illustration.

WHAT IT DOES

Every check on every unit.

Count & identify
3 cartons, an ID each.

Length & width
From above: 30 × 22 cm, in range.

Label
Label colour against the brand reference.

Height, in 3D
17 cm, in range.

Crushed corner
Found by height: one corner 7 cm low.

Verdict
1 pass, 2 rejected. Logged to the shift report.

Generated product, MetriQ readings drawn for illustration.

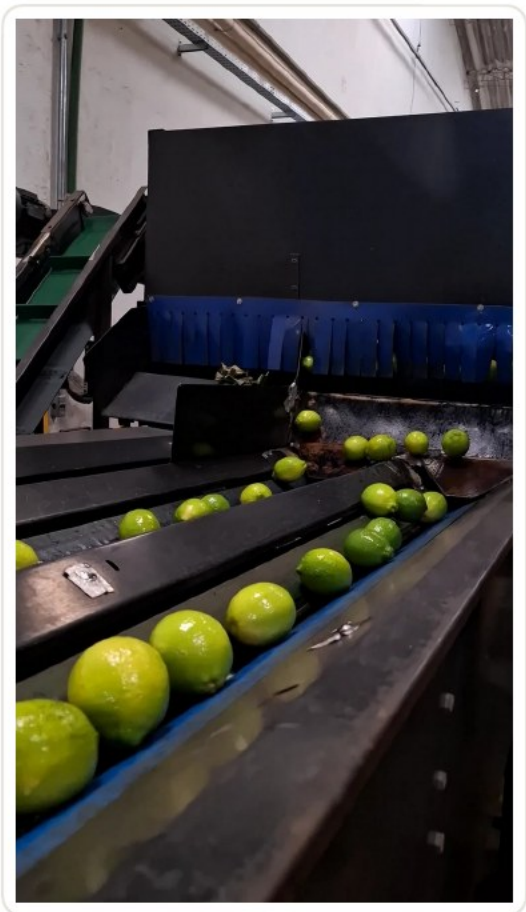

INSTANT DEPLOY

Instant deploy. Any defect, any line.

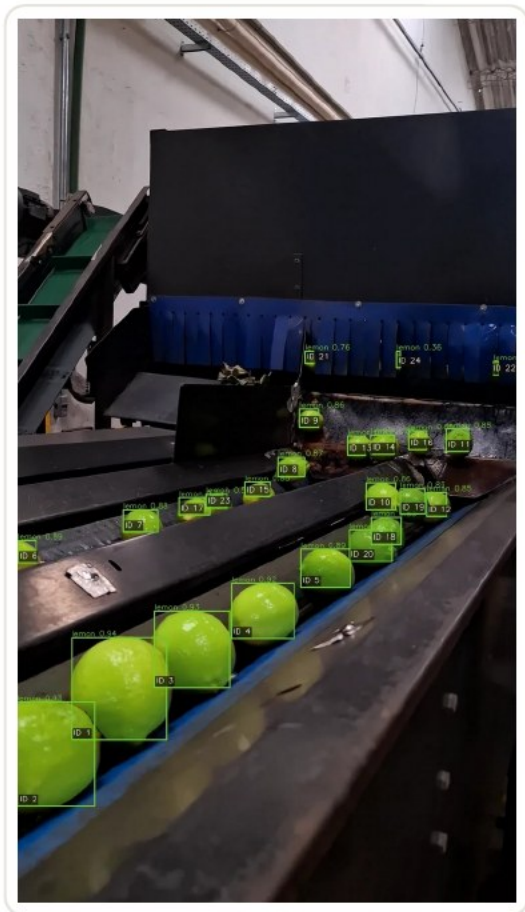

Minutes

to teach MetriQ a new product.

Instant training: name it or show a few images.

Raw camera

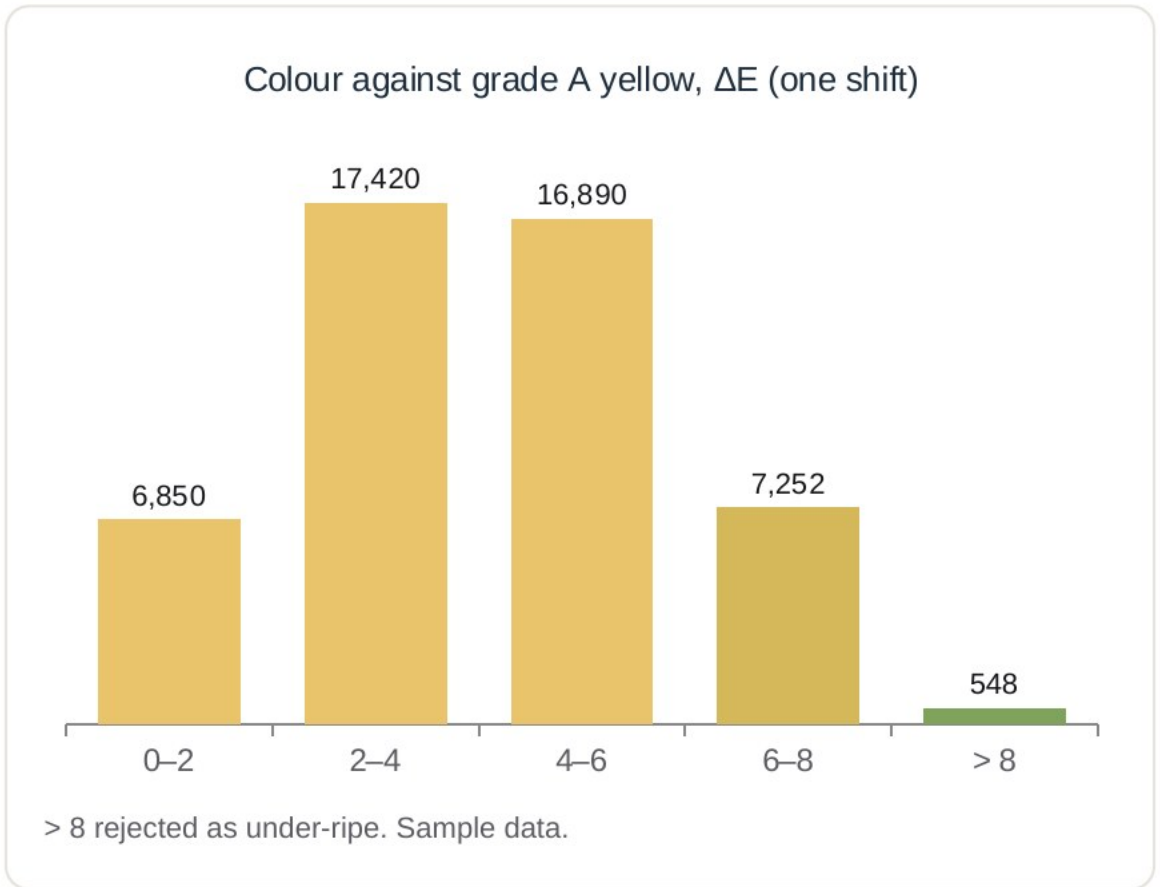

MetriQ AI

COLOUR

Grades colour like a lab, on every unit

- **Measured in CIELAB**
  the colour space labs use.
- **Calibrated to your reference**
  one click against a patch.
- **Steady under changing light**
  light adaptation built in.
- **Rejects by ΔE**
  e.g. under-ripe lemons above ΔE 8.

MEASUREMENT · LIVE DATA

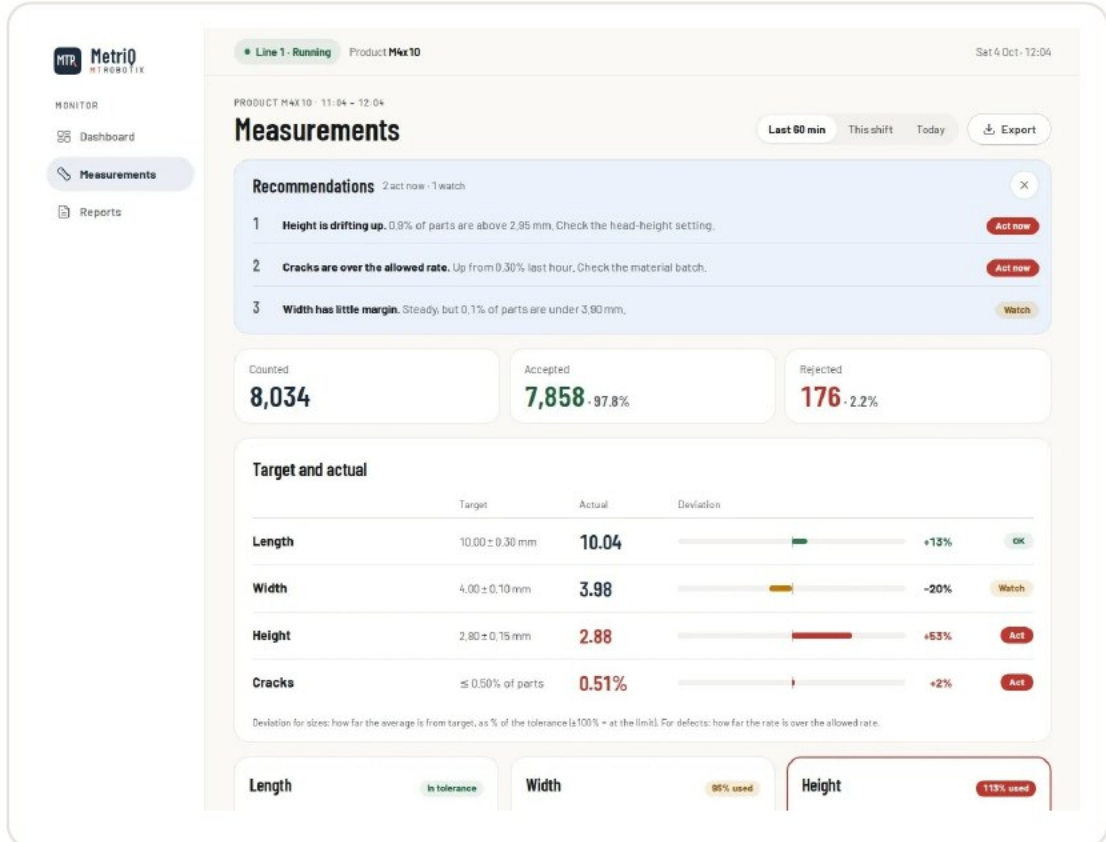

Sees drift before parts fail

1. **Measures every part**
   length, width, height, count and colour.

2. **AI recommendations**
   ranks what needs attention and what to check.

3. **Flags drift before parts fail**
   every part against its tolerance.

4. **Exports every part**
   to CSV or Excel.

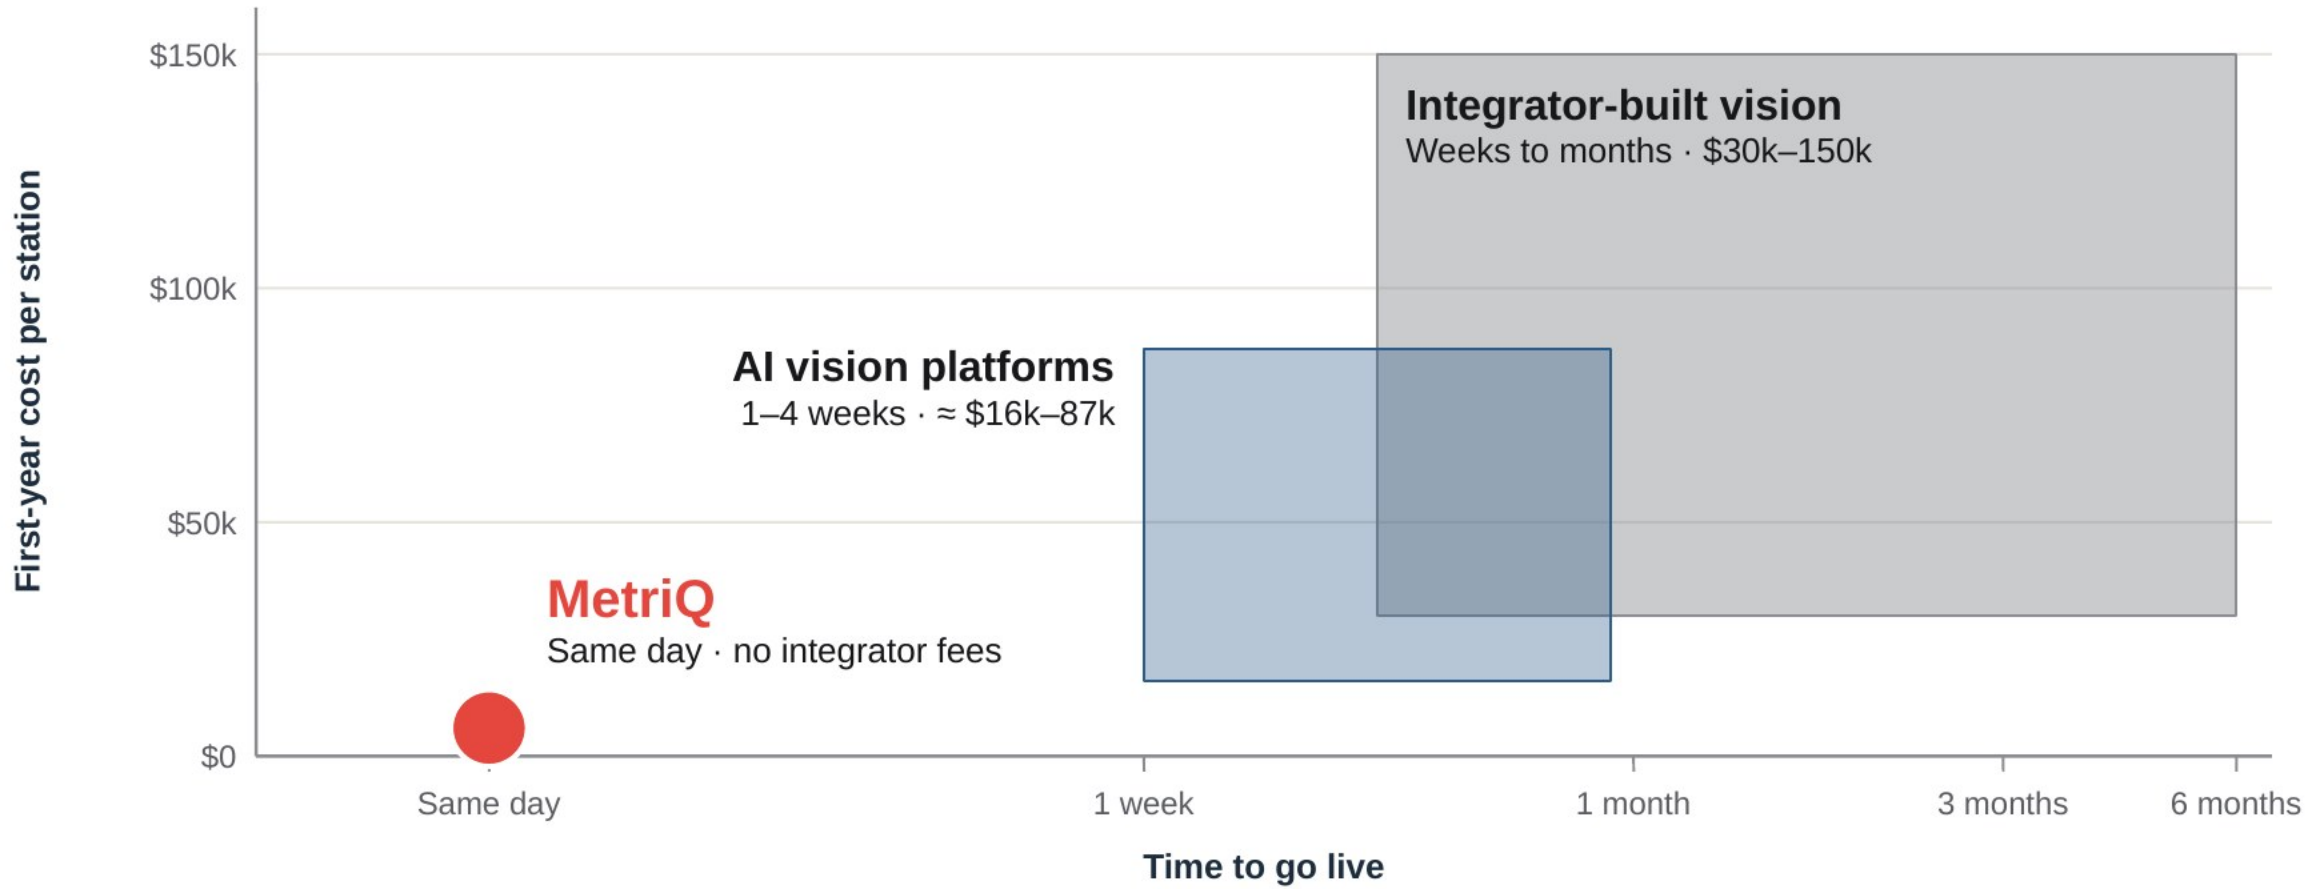

Measurements screen, sample data.

← All capabilities

TIME AND COST

Live the same day. No integration project.

INTEGRATION

From install to live in one day

Mount

No downtime.

Calibrate

Scale, colour and light.

Teach

Show MetriQ a few reference images.

Live

Runs on your line and reports the same day.

HOW WE COMPARE

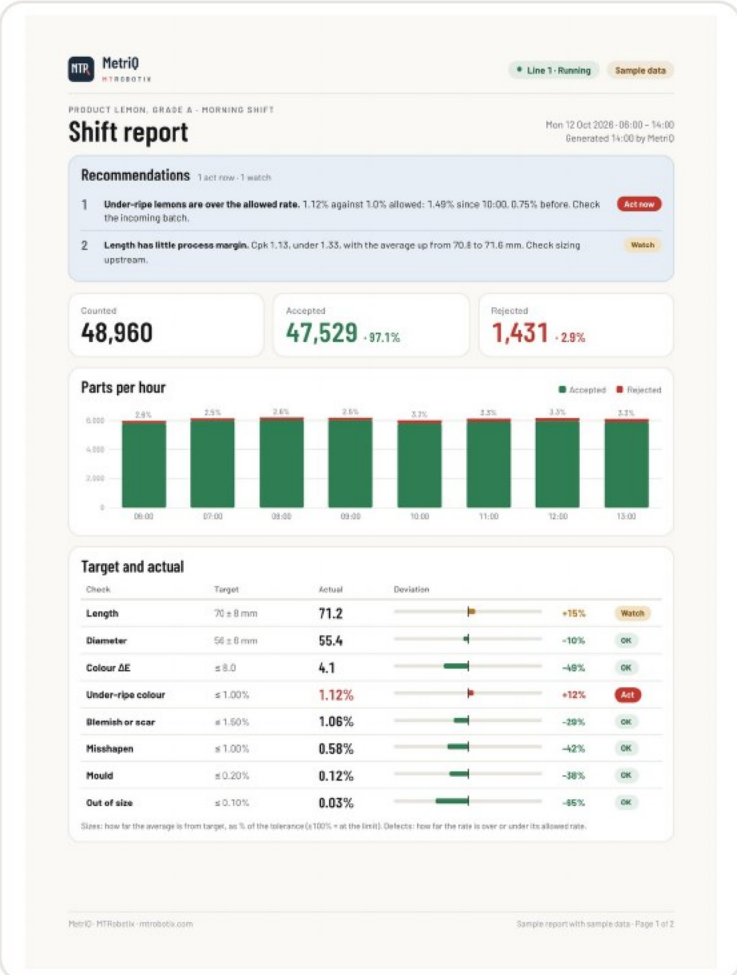

The QC station, without the project

	Manual QC	Rule-based vision	AI vision platforms	MetriQ
Time to go live	Hire and train	Weeks to months	1–4 weeks	**Same day**
New product or defect	Retrain people	Integrator reprograms	Relabel and retrain	**Teach MetriQ in minutes**
Recipe switching	Re-brief the shift	Reprogram per product	Switch job by hand or PLC	**Automatic: recognises the product**
Defects never seen before	Depends on the person	Only what rules describe	Varies by tool	**Anomaly detection**
Data	Paper logs	Pass / fail signal	Pass / fail and images	**Dashboard, reports, AI advice**
Hardware	—	Integrator's choice	Vendor's cameras	**Customized to your line**

Click to reveal MetriQ. Typical market figures; projects vary.

REPORTING

Every shift ends with a report

Counts and reject rate
per hour.

Target against actual
OK, Watch or Act for every check.

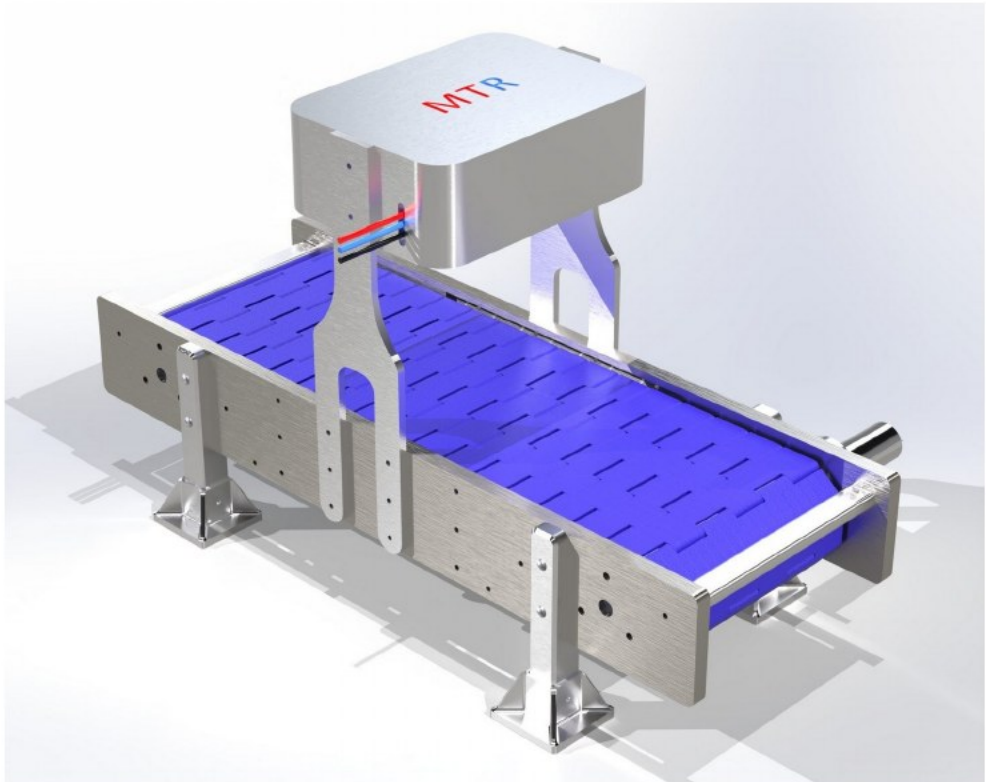

Cpk and drift per size
fix the process, not just the part.

Recommendations
ranked, with what to check.

Sample data.

CUSTOMIZATION

Built around your line

Camera
Line-scan, area-scan or 3D, for your part.

Frame and lighting
Sized to your conveyor. No line changes.

Checks
Your defects, tolerances and reject rules.

Connection
OPC UA, SQL, PLC reject signal, Excel.

Compute
GPU PC, industrial PC or Jetson edge.
